Epidemiological modeling

Epidemiological modeling

Epidemiological modeling

8.000 to 10.000 publications in 2020,
annual growth rate of 30%

ts =((epidem* or infect*) and (mathematic* or simulat* or comput* or dynamic*) near/2 model*))

The

A is for Assume.

B is for Borrow.

C is for Criticize.

D is for, among other things, Decay.

of modelling

From A Concrete Approach to Mathematical Modelling
by Mike Mesterton-Gibbons
(Wiley, 2007, corrected reprint of 1989 original)

Goals

To build an ontology for epidemic models, to improve the classification and analysis of the literature and accelerate the modeling process.

Apply to a specific corpus - *dengue fever modelling* - identifying tendencies and structure (n = 130).

Methodology

Comparative approach (Silva, Souza and Almeida, 2008)

Motivation Scenarium

Ontological Scope

Integration

Conceptual Model

Implementation

Maintainance

To support the task of classification and selection of mathematical models in the field of mathematical epidemiology;

MMO Math Modeling Ontology

EMO Epidemic Modeling Ontology

Protegè-Dublin Core Ontology

IDO Infectious Disease Ontology

Publication Ontology

Protégé 4.2.0 and OWL 2.0.

Source codes and documentations are maintained under version control on Bitbucket

Methodology

Comparative approach (Silva, Souza and Almeida, 2008)

to support the task of classification and selection of mathematical mod
field of mathematical epidemiology:

MMO Math Modeling Ontology

EMO Epidemic Modeling Ontology

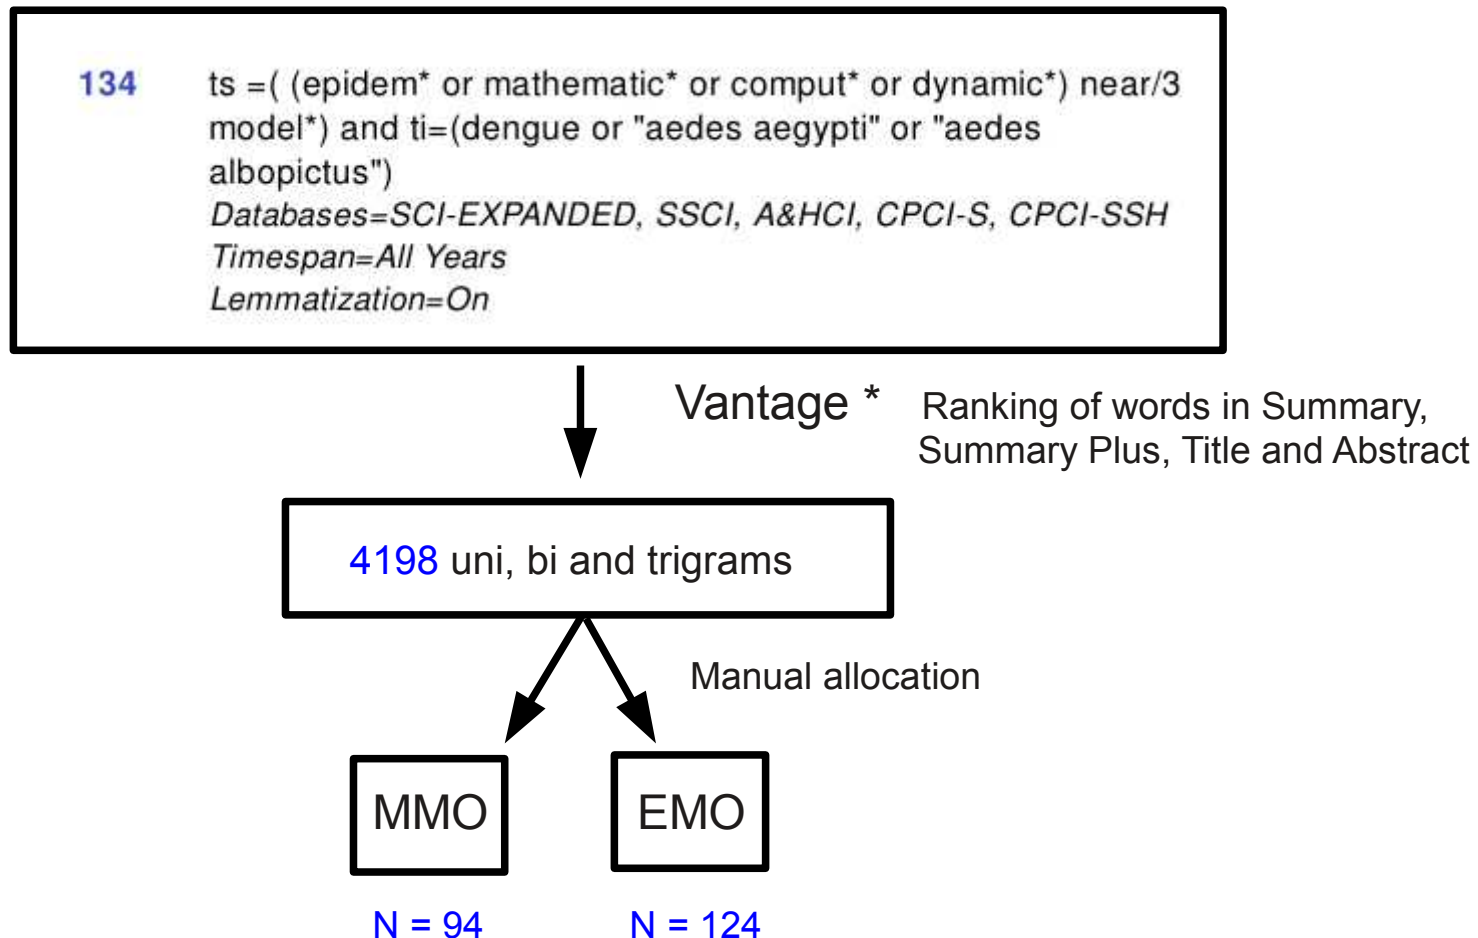

Protegè-Dublin Core Ontology

IDO Infectious Disease Ontology

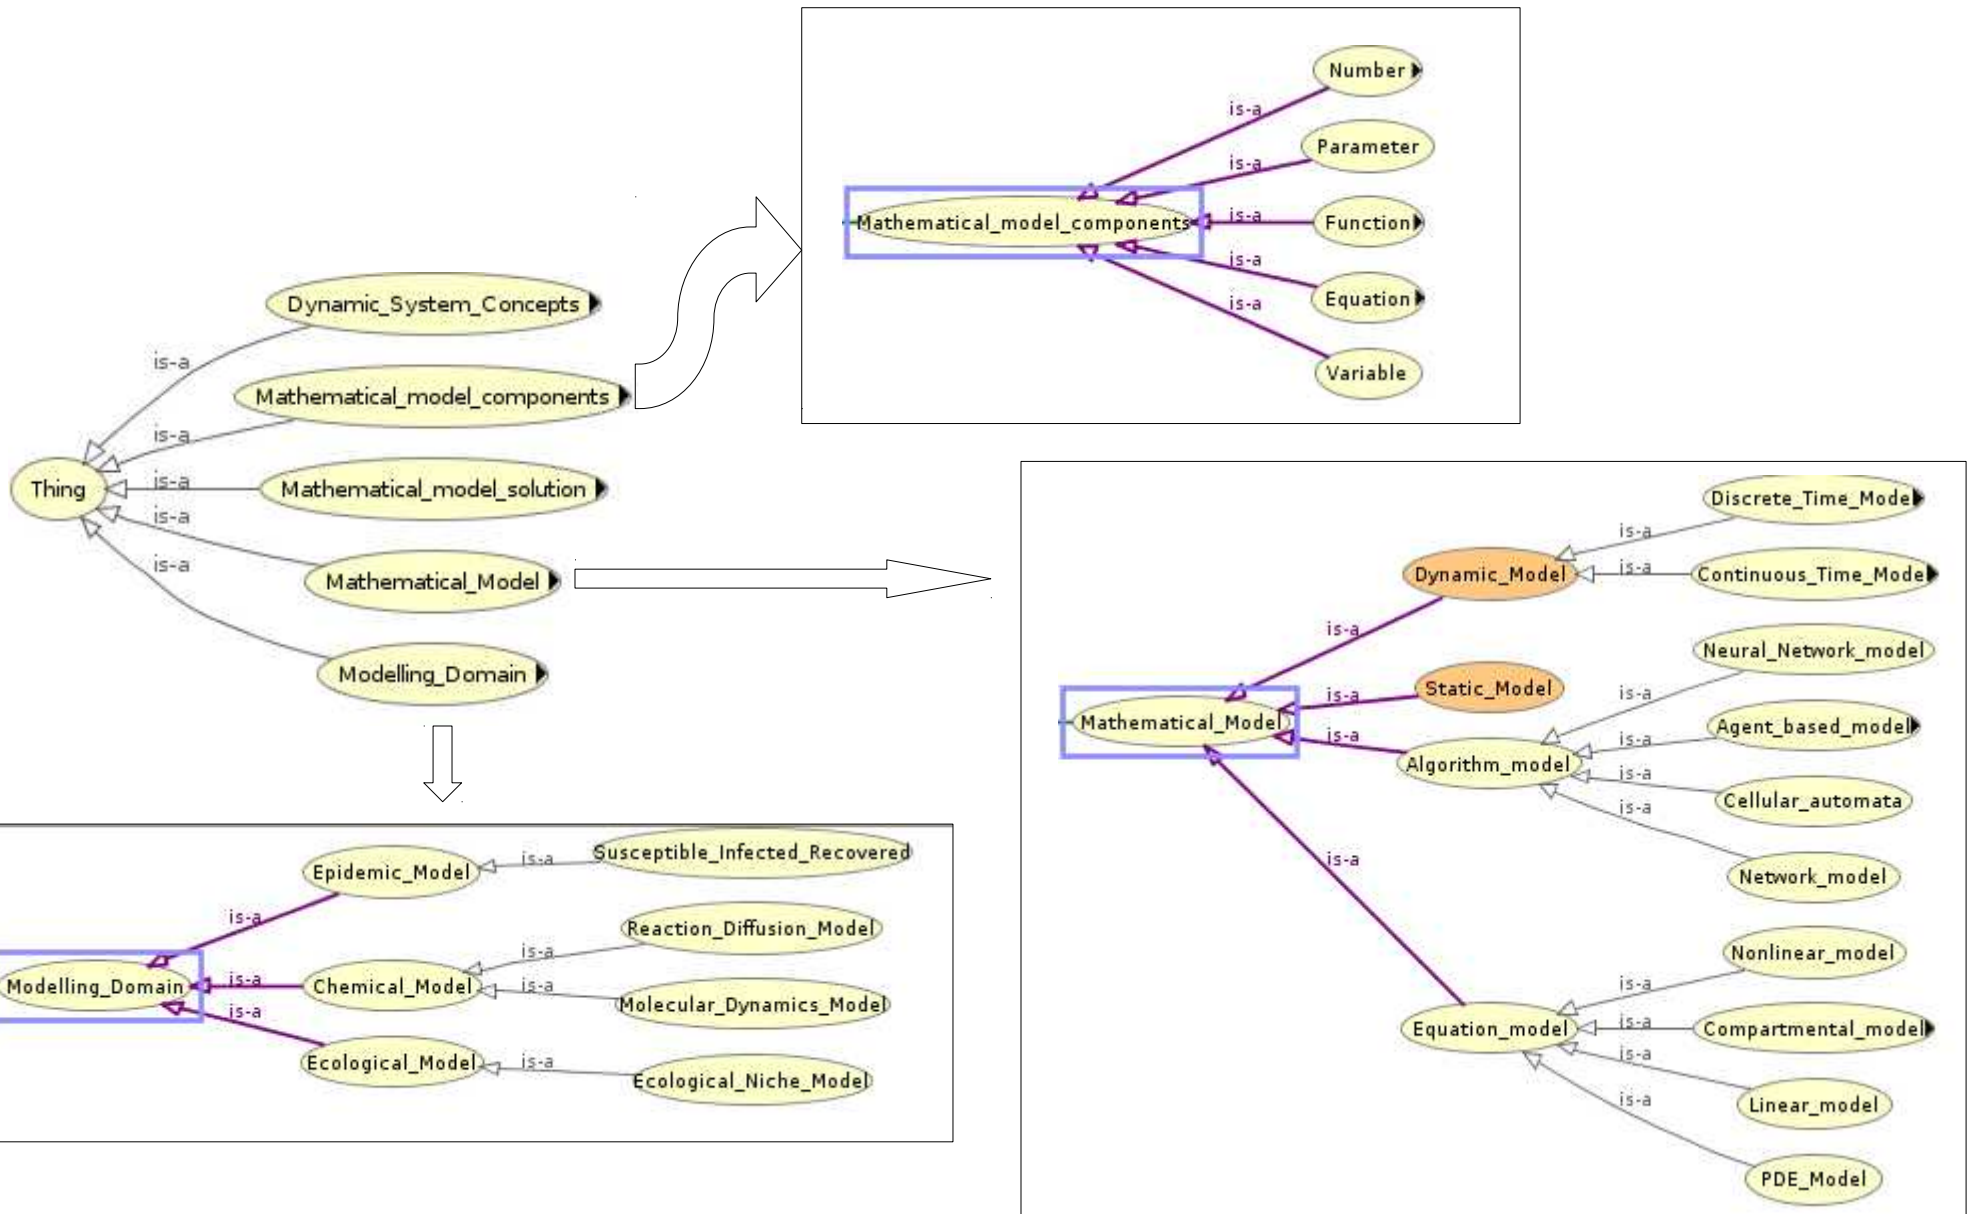

Publication Ontology

Conceptual model

1. Expert opinion: first hierarchical levels
2. Literature Harvesting – *focused on Dengue Fever Modeling*
3. Complemented with Textbooks and Dictionaries

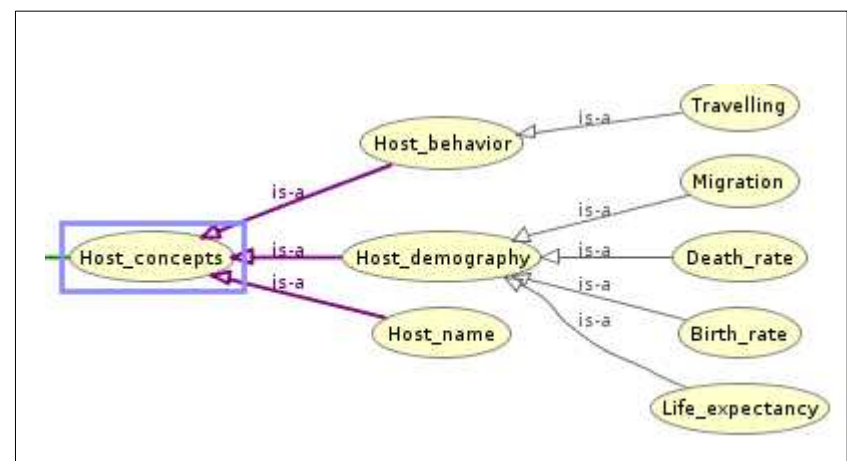

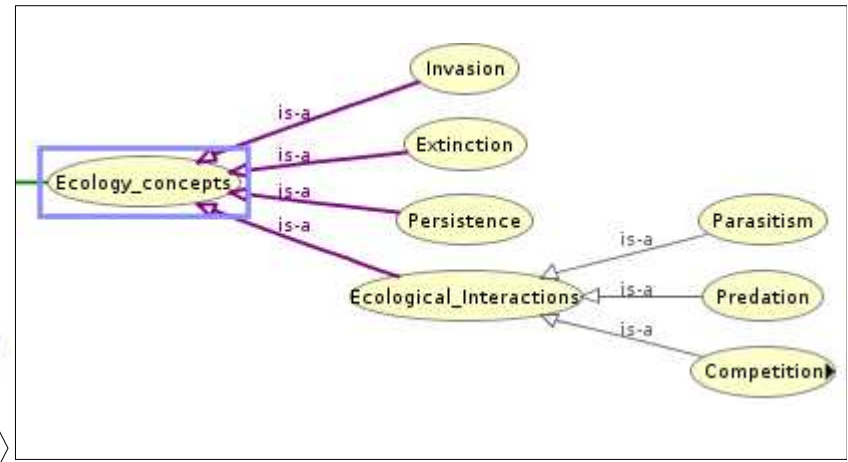

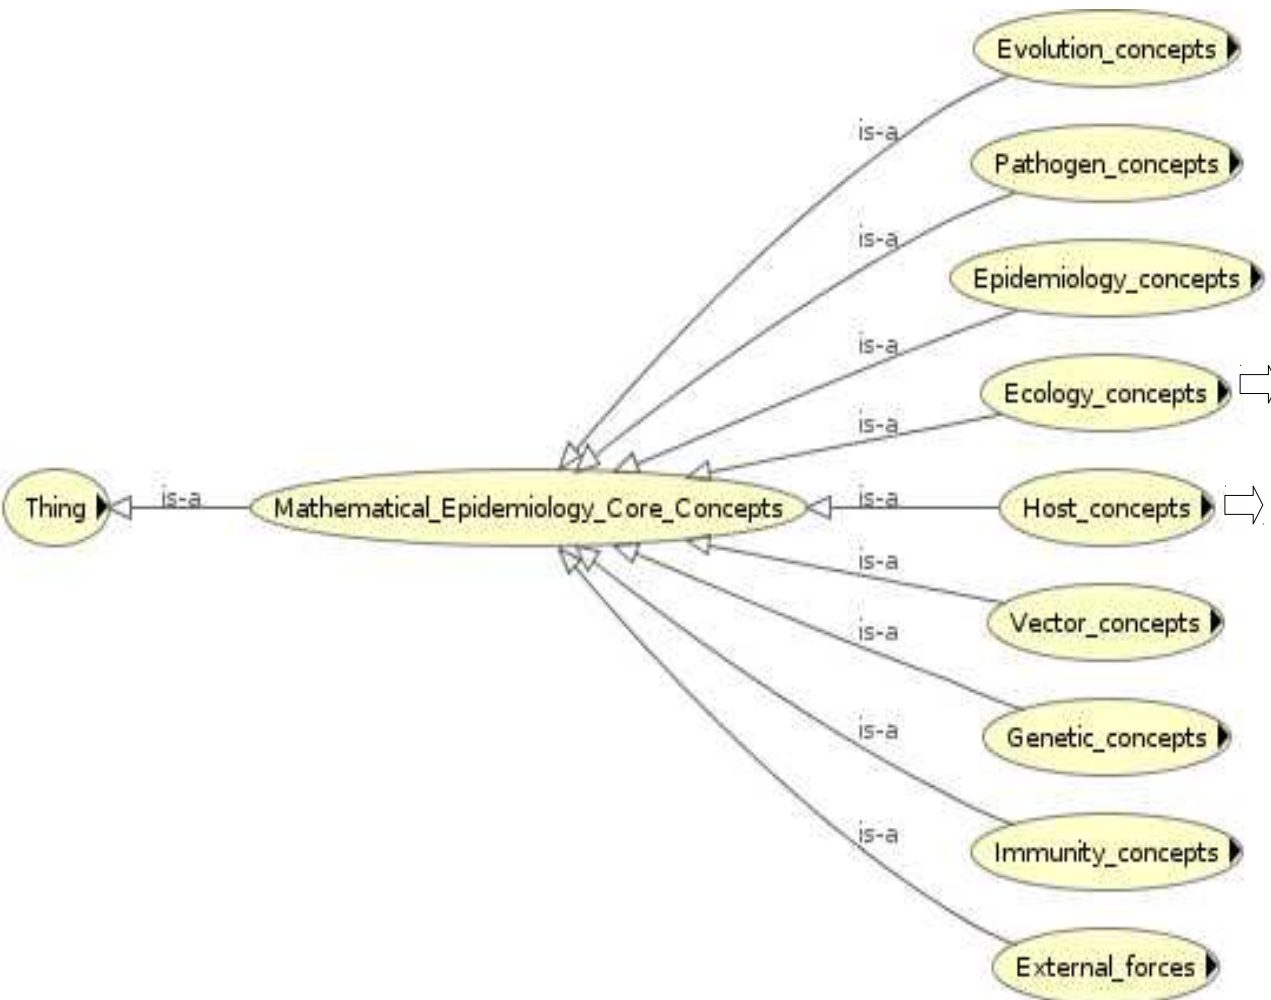

The MMO: Mathematical Model Ontology

Level	1	2	3	4
N	5	26	51	12

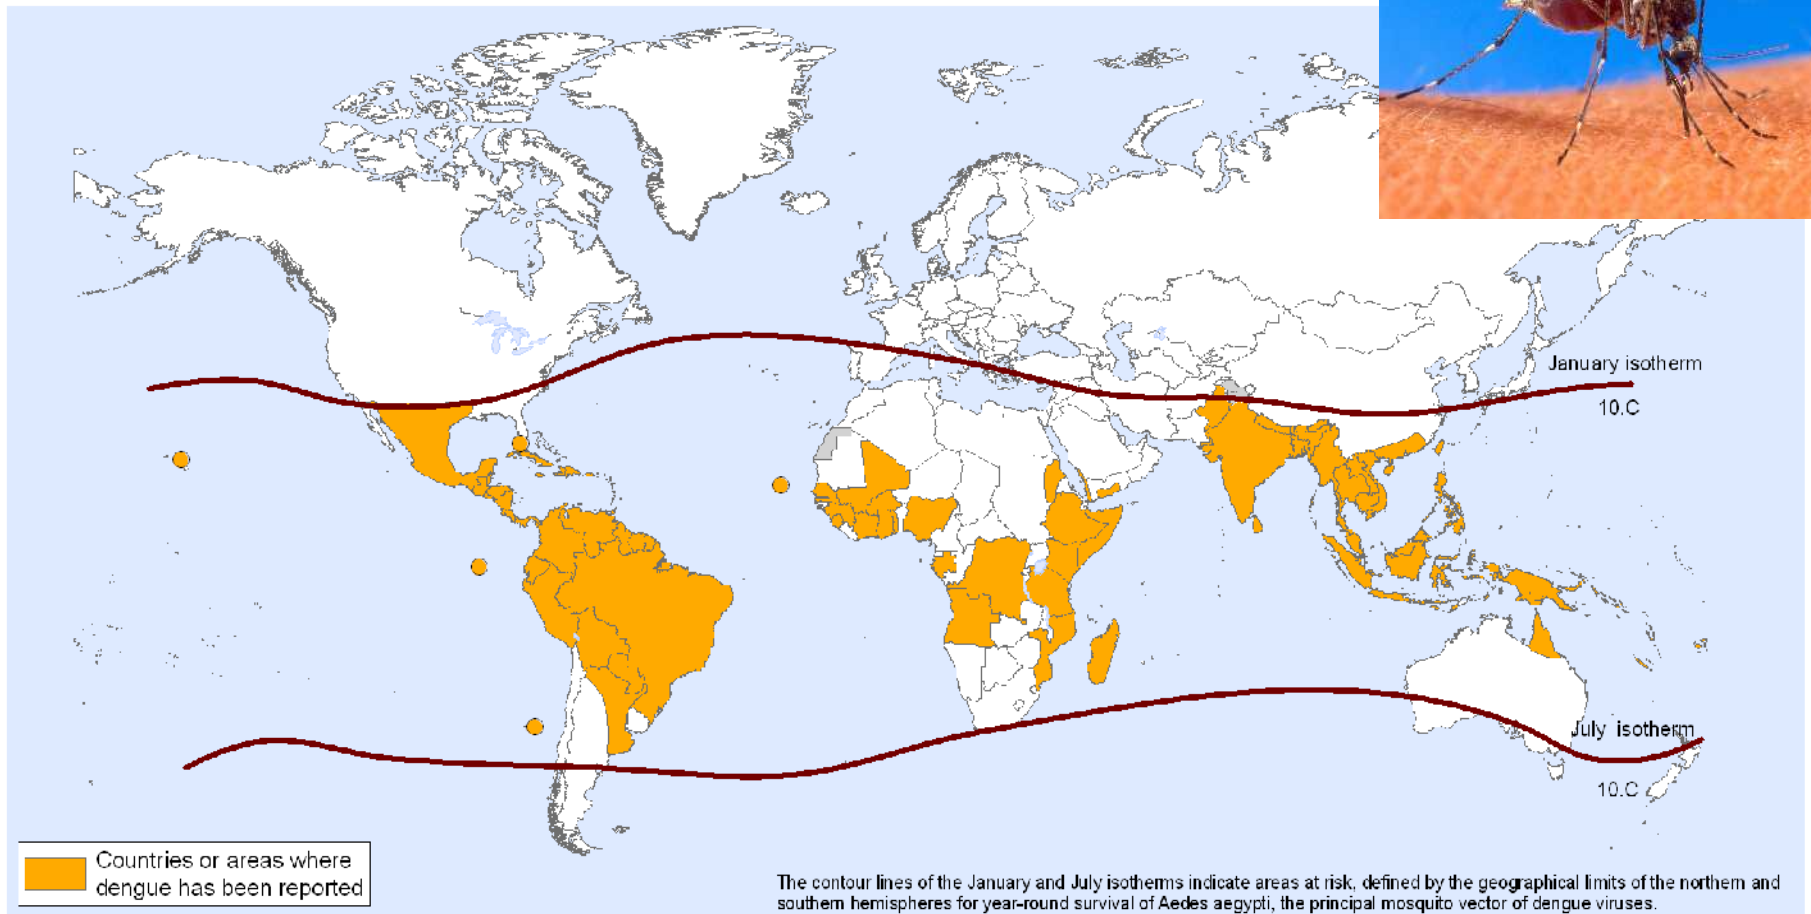

The EMO: Epidemic Model Ontology

Level	1	2	3	4	5
N	1	9	29	62	23

Applying to the Dengue Modelling Literature

Dengue, countries or areas at risk, 2010

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

Themes dominating the dengue modeling literature - EMO

Mathematics dominating the dengue modeling literature - MMO

Conclusions (so far)

- Dengue modeling literature covers a vast amount of themes.
- Representation is more detailed in the vector component where more control opportunities exist.
- Control oriented models follow the trends in innovation
- Mathematical methods are very conservative
